

Comment Form 【Core FS】

February 26, 2016

Title of the Project	Developing a Collaborative Research Platform for Global Environmental Knowledge Using the Concepts of Open Science		
Research Term	Core FS	Project Leader	KONDO Yasuhisa
General advice and comments of the PEC:			
<p>The PEC agreed that this was an important initiative that will increase RIHN visibility, help integrate dispersed data and information, and provide a basic platform for interaction for RIHN and possibly beyond the Institute. In its current form, however, the range and scope of the project need to be defined and at least some of the core elements of the information system specified.</p>			
<p>Also, as it is, the proposal is perhaps not a core project, but part of the infrastructure of the Institute. The project needs to broaden out its ideas, make them international, take in other experiences, reach out to users and practitioners, and consider big data in order to become a Core Project.</p>			
<p>The PEC proposes that this project be given another year of Feasibility Study time to develop a more mature version of the proposal.</p>
