Title of the Project	Designing Common Language and Common Theoretical Basis on Global Environmental Studies		
Research Term	Core FS	Project Leader	KUMAZAWA Terukazu
General advice and comments of the PEC: While the possibility and even desirability of developing a common language in this complicated field was called into doubt by several PEC members, the proposal to find ways to foster dialogue in RIHN was much appreciated. The specifics of the ontology engineering and what role it would play in the project were not really explained in detail and it was hard to assess the feasibility of the proposal. The PEC therefore suggests that another year of Feasibility Study is used to further develop the proposal, possibly combined with the Open Science proposal.
