

Evaluation of transition of FS to FR(PR)

Title of the Project	Environmental Peninsula Science for Establishment of Sustainable Society in Peninsula Area
Project Leader	NAGAO Seiya
General advice and comments of PEC: The research targets and objectives of this proposal are still in a-la-carte style. Although the proposal is based on the previous experiences of researches in Noto Peninsula, the “environmental peninsula science” implying collaborative framework among different disciplines is still immature. Also, the international dimension to enlarge, generalize and compare the understanding about social-natural system of peninsulas was not shown properly. Based on these observations, the PEC came to the conclusion that this proposal is not recommended as an FR project at this moment.
