

## Advice to PR before transition to FR

<b>Title of the Project</b>	<b>Managing Environmental Risks for Sustainable Food and Health Security in Watershed Planning in Southeast Asia</b>
<b>Project Leader</b>	<b>KADA Ryohei</b>
<b>General advice and comments of PEC:</b> This project seems to be well designed with clear objectives and strong linkages with the local partners to implement the research in the area. Given the recent progress achieved so far and the agenda set for the coming terms, this project is well integrated with the RIHN philosophy and expected to come up with successful research outcomes. Meanwhile, the questions of how to incorporate various applications and methodologies and to coordinate the research teams in a more integrative framework in order to attain the research targets should be paid more attention.
