

Integrated Assessment on Regional Vulnerability of Environment, Health and Development in China

Wang Wuyi

Institute of Geographic Sciences and Natural Resources Research, Chinese Academy of Sciences

This presentation will discuss firstly many negative factors such as shortage of natural resources, declining quality of the environment and the health risks, which are affected seriously the environment, health and harmonious development in China. The growing need is to have a basic judgment for national environment in the regional scales. Secondly, this presentation will discuss establishment of the indicators and measurement analysis on vulnerability of environment, health and development to compare the regional state of environment and development in China, furthermore will discuss how to understand this situation. Thirdly, this presentation will introduce the study on longevity areas in China as “good” example, and its benefit for local development.
