

Research Project FR: Final Evaluation
EREC Comments

Project Title	Mapping the environmental impact footprint of cities, companies, and households
Abbreviated Title	Supply chain
Project Leader	KANEMOTO Keiichiro
Project Period	5 years Full Research
Affiliated Program	Global Environmental Culture Program, MATSUDA PD

General advice and comments of the EREC

The project developed an extensive dataset that can characterize sustainability at global scale and at multiple levels. It also developed a smart phone application “CarbonScope” that calculates the carbon impact of a product. There are multiple opportunities for this dataset, such as development of hypotheses and applications.

Looking further, the committee considers that the implications of this application could be taken up with international regulatory agencies leading to a more global reflection on values and consumption patterns.
