Program Director NAKASHIZUKA Tohru Program Comments Summaries of the EREC: The Committee appreciated the clear positioning of Program 2, based on a good analysis of gaps an current situation. Against emphasis on the past of Program 1 and on the future in Program 3, this program is squarely focused on the present, with an overall concern with resource management and governance. This positioning provides good potential for transdisciplinary engagement. The Committee mainly commented on the key concepts used. These need to be refined theoretically order to move the program beyond the merely practical towards generating academic value. It will the useful to position the program in existing conceptual frameworks, including ecosystem services. The definition and coverage of the term "resources" needs further clarification. Several members suggested the inclusion of human resources or if these are excluded from the concept of resources, the ensure that the social aspects receive sufficient attention. Others suggested including mining resource and invisible resources such as hyper-sonic sound. Likewise, it was felt that the idea of fairness is important but broad: it may include a range of aspect and therefore its meaning needs to be pinpointed. Ultimately, fairness is a normative concept and requires explicit value judgement. This provides good potential to connect to the normative aspect or the program is a provide good potential to connect to the normative aspect or provides good potential to connect to the normative aspect or provides good potential to connect to the normative aspect or provides good potential to connect to the normative aspect or provides good potential to connect to the normative aspect or provides good potential to connect to the normative aspect or provides good potential to connect to the normati	Title of the Program	Fair use and management of diverse resources
