

Evaluation of transition of FS to FR (PR)

Title of the Project	Atmospheric Methane and Agriculture in Monsoon Asia
Project Leader	HAYASHIDA Sachiko
General advice and comments of PEC: This is a well prepared and presented project on an important topic of study. Nevertheless, PEC believes that it is difficult to meet the integrative/interdisciplinary criteria of RIHN given the weak human/social aspects of the proposal. Of the three research objectives of methane, aerosol and regional climate sensitivity, the project can more productively focus on methane only.
