

Evaluation of transition of FS to FR (PR)

Title of the Project	Coastal Area Capability Enhancement in Southeast Asia
Project Leader	ISHIKAWA Satoshi
General advice and comments of PEC: This is a well planned and comprehensive project. Its objectives are clear and show promise to contribute to the local area. The project also makes full use of past linkages with potential local partners. The concept of “area capability” is interesting and consistent with RIHN research orientation. The number of core members and affiliated researchers may be too large to be efficiently coordinated.
