

Evaluation of transition of FS to FR(PR)

Title of the Project	Desertification and Livelihood in Afro-Eurasian Semi-Arid Zone
Project Leader	TANAKA Ueru
General advice and comments of PEC: The framework shown in the proposal is very clear, and an obvious outcome can be expected. Also, it is supported by solid examination of usefulness of the core innovative technology of fallow bands, which is worth disseminated. So the proposal is highly recommended as an FR project. The methodology for studying socio-cultural aspects needs to be further developed in order to understand how the innovation spreads effectively in different contexts and to realize the inter-regional technological transfer appropriately.
