

## Final Evaluation at the end of FR

<b>Title of the Project</b>	<b>Agriculture and Environment Interactions in Eurasia: Past, Present and Future -A ten-thousand-year history-</b>
<b>Project Leader</b>	<b>SATO Yo-Ichiro</b>
<b>General advice and comments of PEC:</b> <p>This is an impressive work looking at the past, present and future of agriculture through analysis of the history, genetic diversity and sustainability of human activity and environment interactions. An interdisciplinary approach with various methods has been successfully implemented. The significance of this research has been expressed distinctly through various publications, symposia and other activities to raise the scientific consciousness and public awareness about future perspectives towards agriculture. As a result, it is agreed by PEC that this project has the final assessment of being highly compatible with RIHN's founding missions and research, successfully completing most of the original plan put forward in the beginning and highly effective in communicating with society and being reasonably cost-effective.</p>
